DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-37 are rejected under 35 U.S.C. 102(e) as being anticipated by Boesch et al. (US Patent No. 5,897,621).

As per claims 1-37, Boesch et al disclose a system and method for processing payment transactions in a multi-currency payment system. The system and method comprise communicating to a sender via a communications network a user interface that facilitates sender input with respect to a desired currency in which a payment is to be made; receiving data identifying a sender-selected currency from the sender via the communications network; communicating to the sender via the communications network information identifying a current exchange rate for conversion between the sender-selected currency and a sender primary currency; and if receiving a confirmation of the payment in the sender-selected currency from the sender, informing a recipient via the communications network about the payment in the sender-selected currency. Boesch et al also disclose teach a sender funds analyzer and a recipient analyzer.

Applicant is directed to column 7, line 7 to column 9, line 25.

Boesch et al further disclose the sender primary currency is a currency used in a majority of transactions involving the sender and wherein the payment is to fund from a balance in the sender-selected currency that is maintained within a sender account.

See column 5, lines 44-64 and column 6, lines 20-31 and lines 44-49 of Boesch et al.

Boesch et al also teach determining that the sender does not have a balance in the sender selected currency within the sender account and converting an equivalent value in the sender primary currency into the sender-selected currency to fund the payment. See column 6, lines 20-31, column 4, lines 8-45 and column 10, lines 29-65 of Boesch et al.

Boesch et al also disclose updating the current exchange rate at predefined time intervals and upon determining that a predefined time interval has expired, retrieving current exchange rates from a third party system, applying a set of rules to the retrieved rates to verify that the retrieved rates are correct and replacing existing rates are correct and replacing existing rates stored in a database with the retrieved rates. See column 8, line 49 to column 9, line 3.

Boesch et al also disclose accumulating payment transactions in each of a plurality of currencies used during the predefined time interval; requesting the third party system to trade the accumulated payment transactions and receiving confirmation from the third party system that trades of the accumulated payment transactions have been completed. See column 14, lines 14-40.

Functions of determining that the recipient did not accept the payment in the sender-selected currency and displaying an error message to the sender offering the sender to select a different currency for the payment are to provide an interactive session to the involved parties are inherent features in the system of Boesch et al.

The computerized system stores all transactions involved all clients that are stored for inventory control and dispute resolution purposes. Thus, a history of currency conversion calculations from previous transactions involving the sender is an inherent feature in the system of Boesch et al.

Boesch et al also disclose determining whether a recipient requests a conversion of the payment account into the recipient primary currency, and if not creating a new balance in the sender-selected currency within the recipient account and adding the payment amount to the new balance. See column 4, lines 8-45.

Boesch et al also teach that payments will be block for which the recipient does not have a balance.
